

**Things aren't
always what
they seem on
the surface.**

Gradient Optimized seismic data yields more accurate information about your prospect. It's fast and cost effective. Gradient Optimized seismic data integrates 3-D FTG Three Dimensional Full Tensor Gradients providing five additional constraints to identify the size, shape and thickness of complex structures with unprecedented clarity and accuracy.

Stamp your interpretation with the GO symbol to reduce risk and improve drilling decisions. Start with GO from Bell Geo.

◀ *The difference between GO (Gradient Optimized) seismic and regular seismic data is tantamount to the iceberg you see and the iceberg you don't.*
